DIGITAL WIDING MACHINE IBCRX-800

RX-800 digital winding machine is a digital programmable winding machine, which also has a desk and acetate tape insulating tape, such as seat design for the production of high-frequency transformer best models. Has the following advantages: Microcomputer controller, the data set is easy.

Row spool using stepper motor driven with a constant current circuit, cable high speed, high accuracy.

Starting point can be taught about the input, and displays the current row spool position.

Multi-line rows of thread, and can be mounted in four different diameter wire.

Alone to complete the winding and insulation, acetate tape wound.

Replaceable row thread, synchronization becomes biaxial winding machine.

A foot switch device manufacturing operations quickly and conveniently.

Can be set from around the point, width, line spacing, speed, etc., to achieve multi-speed multi-purpose.

Section 999 can be set to step sequence, and set the above values can be stored for one year.

Model	IBCRX-800
Number of axes	1
Wire	0.08~1.0mm
Line spacing	0~9.999mm
Width	100mm(Max.)
Swing	110mm(Max.)
Spindle motor	Brushless DC Motor
Motor cable	Stepper motor
Maximum speed	6000rpm
Memory Capacity	999 组
Use the power	AC220V +10%, 50/60 Hz
Machine size (CM)	38x48x60
Weight (kg)	32
